

Project Name: SME Alternative Financing
Team Members: Heidi Tan (Team Leader), Bill Ma
Date: 27th November 2015

Overview

For the last two weeks, we have been focusing on our project documentation website as well as doing research on both the topic of alternative financing and ways on how to program the financial portal. We decided on the various headings for the tabs on our website to present our project in an organised manner. In addition, we have started writing out the various content (eg. background and context, detailed project requirements) for the website and have already uploaded some information on the website such as the biweekly reports. We have also begin to draw up some prototypes based on the extensive research we have done and these will be uploaded on the website as well.

Summary of Meetings Held

No meetings were held for the last two weeks but we have been constantly communicating with our client and updating him on the progress of our project.

List of Tasks Completed

1. Planned out the interface of the project documentation website
2. Uploaded biweekly report files that can be downloaded for viewing on the website
3. Began to brainstorm and draw up various prototypes
4. Started to write out necessary content for the website detailing our progress

Problems to be Resolved

We were coding the project documentation website by ourselves as we were initially unsure whether we could use a template that can be obtained from the internet for our project documentation website. We will be clarifying with our TAs about this. Also, we plan to draw up a UML diagram for the website as part of our prototype but we would have to brush up on the syntax of UML diagrams beforehand. After looking through everything we have uploaded on the website so far, we have come to the conclusion that we need to present our information in a more interesting manner with more graphics and videos in order to capture and sustain our readers' attention.

Future Plans

Over the next two weeks, we plan to finish our website with all the content uploaded and start filming a video explaining our project as part of one of the deliverables of this module. Also, we aim to do up at least two prototypes as well as record all the research we have done in an organised manner. We will also investigate and model the user interface for our system.

Individual Tasks

Heidi:

I have been writing up the content to be uploaded on the website. Also, I liaised with our client to keep him updated with the progress of our project by sending him our biweekly reports and other documentations we have written out as part of the project. In addition, I have began drawing up various prototypes for our financial portal as well and doing more research.

Bill:

During the last two weeks, I was mainly focusing on programming the project website. During the lab in the first week, Heidi and I decided that we will be using HTML and CSS to do the coding. By the end of the two weeks I finished programming 70% of the whole website.
