Project Name: SME Alternative Financing
Team Members: Heidi Tan (Team Leader), Bill Ma
Date: 24th March 2016

Overview

During the last two weeks, we finished up all the essential coding for the application, such as implementing the instant messaging and profile page features. We also added other features such as being able to go to other users' profile pages from the search page and so on. We have started on the styling and will be starting on testing soon. Also, we will be contacting our client to fix a handover date.

Summary of Meetings Held

1. Meeting date and time: 15th March 2016, 2pm

   We had a short meeting during the lab session on Tuesday. We discussed the implementation of the instant messaging feature as it was giving us problems. We also decided which gem to use to add a HTML5 editor for our application.

2. Meeting date and time: 22nd March 2016, 2pm

   We finished the major coding for the application. We discussed and decided on how we would like the user interface of the application will look like. Bill would be in charge of the styling using CSS.

List of Tasks Completed

1. Finished implementing all major features of the application.
2. Decided on the style of the user interface.
3. Contacted client on handover date.

Problems to be Resolved

There are currently no pressing issues for our project.

Future Plans

In the upcoming weeks, we will be finishing up the styling of the application and start on testing. Also we will be editing the code to fix any bugs that we find. We hope to fix a handover date with our client as soon as possible and start on all the relevant documentation for the project as well.

Individual Tasks

Heidi:

I implemented several features for the application. Firstly, the user will be able to edit the information on his profile page. There is also a HTML5 editor for him to upload any images or text to display on his profile page. This will allow him to

use different fonts, colours and so on to visually pitch his product or service if he was working for an SME or upload his resume if he was a credit provider. Additionally, I managed to get the instant messaging feature working with the Faye gem and Private Pub. I also deployed the development version of the application and set up the configuration for the instant messaging platform as it requires another server for messages to be received and sent out.

Bill:

During the last two weeks, firstly, I did some research on methods of implementing the instant messaging feature and worked on that. However my attempt was not successful, I asked my partner for help and my partner finished it afterwards. Secondly, after my partner has finished the website, I was working on the styling for the website using css, and the styling for the website is 90% completed by the end of the week.
